# INTRODUCTION

## NATIONAL TRAUMA DATA STANDARD BACKGROUND

In 1989, the American College of Surgeons (ACS) established the National Trauma Data Bank (NTDB) with the goal of collecting clinical data on patients treated at U.S. trauma centers. Our expectation was that improvement in the care of the injured patient must be informed by accurate and comprehensive clinical data. While the NTDB transitioned to become part of the broader network of services known as the Trauma Quality Programs (TQP) in 2017, our goals have remained consistent.

In our efforts to improve trauma patient care, the ACS Committee on Trauma (COT) created the National Trauma Data Standard (NTDS). The first NTDS Data Dictionary was implemented in 2007 and served to ensure that all participating trauma centers were submitting the data required by the COT based on standard definitions and formats.

The NTDS enhances other ACS programs, including the Trauma Quality Improvement Program (TQIP), the ACS Verification Review and Consultations (VRC) program, and Performance Improvement and Patient Safety (PIPS).

## NATIONAL TRAUMA DATA STANDARD OBJECTIVE

The objective of the NTDS is to define a standard set of clinical data elements in order to characterize trauma care at the national level, and to provide meaningful inter-hospital comparisons. The NTDS provides the foundation for TQIP, as well as key research projects that drive improvements in the care of the injured patient.

# NATIONAL TRAUMA DATA STANDARD (NTDS) PATIENT INCLUSION CRITERIA

**DESCRIPTION:** To ensure consistent data collection across states into the National Trauma Data Standard, a trauma patient is defined as a patient sustaining a traumatic injury within 14 days of initial hospital encounter and meeting the following criteria\*:

**At least ONE** of the following injury diagnostic codes defined as follows:

***International Classification of Diseases, Tenth Revision (ICD-10-CM):***

- S00-S99 with 7th character modifiers of A, B, or C ONLY. (Injuries to specific body parts—initial encounter)
- T07 (unspecified multiple injuries)
- T14 (injury of unspecified body region)
- T79.A1-T79.A9 with 7th character modifier of A ONLY (Traumatic Compartment Syndrome—initial encounter)

**EXCLUDING the following isolated injuries:**

***ICD-10-CM:***

- S00 (Superficial injuries of the head)
- S10 (Superficial injuries of the neck)
- S20 (Superficial injuries of the thorax)
- S30 (Superficial injuries of the abdomen, pelvis, lower back and external genitals)
- S40 (Superficial injuries of shoulder and upper arm)
- S50 (Superficial injuries of elbow and forearm)
- S60 (Superficial injuries of wrist, hand and fingers)
- S70 (Superficial injuries of hip and thigh)
- S80 (Superficial injuries of knee and lower leg)
- S90 (Superficial injuries of ankle, foot and toes)

**Late effect codes, which are represented using the same range of injury diagnosis codes but with the 7th digit modifier code of D through S, are also excluded.**

**AND MUST INCLUDE ONE OF THE FOLLOWING IN ADDITION TO (ICD-10-CM S00-S99, T07, T14, and T79.A1-T79.A9):**

- Death resulting from the traumatic injury (independent of hospital admission or hospital transfer status);  
**OR**
- Patients transferred from one acute care hospital\*\* to another acute care hospital;  
**OR**
- Patients transferred/discharged to hospice (e.g., hospice facility, hospice unit, home hospice);  
**OR**
- Patients directly admitted to your hospital (exclude patients with isolated injuries admitted for elective and/or planned surgical intervention);  
**OR**
- Patients who were an in-patient admission and/or observed.

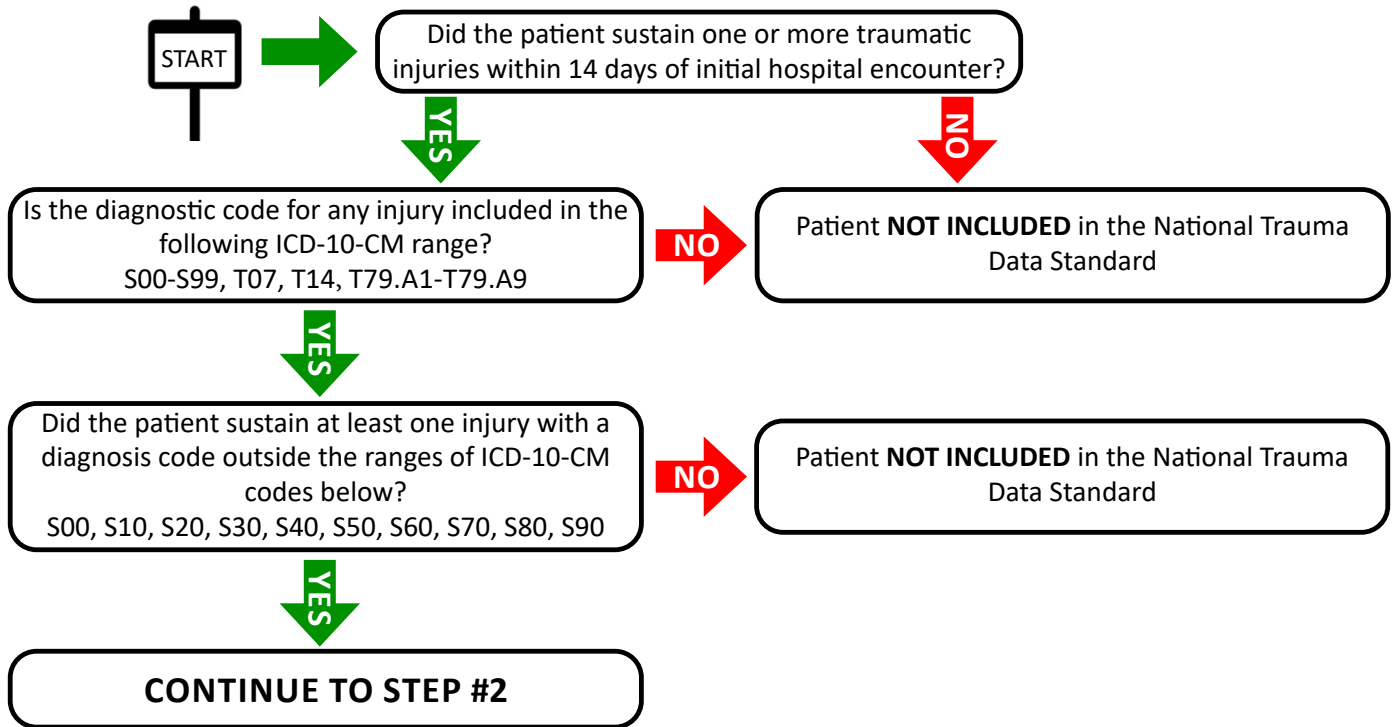

\*In-house traumatic injuries sustained after initial ED/hospital arrival and before hospital discharge at the index hospital (the hospital reporting data), and all data associated with that injury event, are excluded.

\*\*Acute Care Hospital is defined as a hospital that provides inpatient medical care and other related services for surgery, acute medical conditions or injuries (usually for a short-term illness or condition). “CMS Data Navigator Glossary of Terms” [https://www.cms.gov/Research-Statistics-Data-and-systems/Research/ResearchGenInfo/Downloads/DataNav\\_Glossary\\_Alpha.pdf](https://www.cms.gov/Research-Statistics-Data-and-systems/Research/ResearchGenInfo/Downloads/DataNav_Glossary_Alpha.pdf) (accessed January 15, 2019).

# COMMON NULL VALUES

## DESCRIPTION

Values used with each of the National Trauma Data Standard Data Elements described in this document that have been defined to accept null values.

## ELEMENT VALUES

1. Not Applicable (NA)
2. Not Known/Not Recorded (NK/NR)

## ADDITIONAL INFORMATION

- For data collection to be of value and reliably represent what was intended, a strong commitment must be made to ensure the correct reporting of incomplete data. When incomplete data elements associated with the National Trauma Data Standard are submitted electronically using XML, the indicated null values must be reported to ensure each data element has been addressed.
- Not Applicable (NA): Applies when the information requested was not applicable at the time of the patient care event. For example, the common null value “NA” is reported in the data element *Other Transport Mode* if a patient had a single mode of transport.
- Not Known/Not Recorded (NK/NR): Applies when the information is unknown (to the patient, family, health care provider) or not recorded at the time of the patient care event. For example, the common null value “NK/NR” is reported in the data element *Injury Incident Date* if it was documented as “Unknown” in the patient’s medical record. Another example, the common null value “NK/NR” is reported when documentation was expected, but none was provided i.e., *Initial ED/Hospital Temperature* was not documented in the patient’s medical record.

## DATA ELEMENT LEGEND

<b>Definition</b>	Consists of the 5 sections of each data element's page(s): description, element values, additional information, data source hierarchy guide, and associated edit checks.
<b>Description</b>	General meaning of the data element.
<b>Element Values</b>	Values that must be reported for the data element.
<b>Additional Information</b>	Instructions for reporting the data element.
<b>Data Source Hierarchy Guide</b>	Sources where information can be obtained in the medical record. [This is simply a guide; centers should use the most reliable source at their center.]
<b>Associated Edit Checks</b>	Validation rules. [See "Appendix 2" for additional information]

## DEMOGRAPHIC INFORMATION

# PATIENT'S HOME ZIP/POSTAL CODE

## DESCRIPTION

The patient's home ZIP/postal code of primary residence.

## ELEMENT VALUES

- Relevant value for data element

## ADDITIONAL INFORMATION

- Can be stored as a 5 or 9-digit code (XXXXX-XXXX) for US or can be stored in the postal code format of the applicable country.
- May require adherence to HIPAA regulations.
- If **Patient's Home ZIP/Postal Code** is "Not Applicable," report data element **Alternate Home Residence**.
- If **Patient's Home ZIP/Postal Code** is "Not Known/Not Recorded," report: **Patient's Home Country**, **Patient's Home State** (US only), **Patient's Home County** (US only), and **Patient's Home City** (US only).
- If **Patient's Home ZIP/Postal Code** is reported, must also report **Patient's Home Country**.

# PATIENT'S HOME COUNTRY

## DESCRIPTION

The country where the patient resides.

## ELEMENT VALUES

- Relevant value for data element (two-digit alpha country code)

## ADDITIONAL INFORMATION

- Values are two-character FIPS codes representing the country (e.g., US).
- If **Patient's Home Country** is not US, then the null value "Not Applicable" is reported for **Patient's Home State**, **Patient's Home County**, and **Patient's Home City**.

0140	1	Single Entry Max exceeded

## PATIENT'S HOME STATE

### DESCRIPTION

The state (territory, province, or District of Columbia) where the patient resides.

### ELEMENT VALUES

- Relevant value for data element (two-digit numeric FIPS code)

### ADDITIONAL INFORMATION

- Only reported when *Patient's Home ZIP/Postal Code* is "Not Known/Not Recorded" and country is US.
- Used to calculate FIPS code.
- The null value "Not Applicable" is reported if *Patient's Home ZIP/Postal Code* is reported.
- The null value "Not Applicable" is reported for non-US hospitals.

# PATIENT'S HOME COUNTY

## DESCRIPTION

The patient's county (or parish) of residence.

## ELEMENT VALUES

- Relevant value for data element (three-digit numeric FIPS code)

## ADDITIONAL INFORMATION

- Only reported when *Patient's Home ZIP/Postal Code* is "Not Known/Not Recorded" and the country is the US.
- Used to calculate the FIPS code.
- The null value "Not Applicable" is reported if *Patient's Home ZIP/Postal Code* is reported.
- The null value "Not Applicable" is reported for non-US hospitals.

## PATIENT'S HOME CITY

### DESCRIPTION

The patient's city (or township, or village) of residence.

### ELEMENT VALUES

- Relevant value for data element (five-digit numeric FIPS code)

### ADDITIONAL INFORMATION

- Only reported when *Patient's Home ZIP/Postal Code* is "Not Known/Not Recorded" and country is the US.
- Used to calculate the FIPS code.
- The null value "Not Applicable" is reported if *Patient's Home ZIP/Postal Code* is reported.
- The null value "Not Applicable" is reported for non-US hospitals.

0440	1	Single Entry Max exceeded

## ALTERNATE HOME RESIDENCE

### DESCRIPTION

Documentation of the type of patient without a home ZIP/postal code.

### ELEMENT VALUES

1. Homeless
2. Undocumented Citizen
3. Migrant Worker

### ADDITIONAL INFORMATION

- Only reported when *Patient's Home ZIP/Postal Code* is "Not Applicable."
- Report all that apply.
- Homeless is defined as a person who lacks housing and includes a person living in transitional housing or a supervised public or private facility providing temporary living quarters.
- Undocumented Citizen is defined as a national of another country who has entered or stayed in another country without permission.
- Migrant Worker is defined as a person who temporarily leaves his/her principal place of residence within a country to accept seasonal employment in the same or different country.
- The null value "Not Applicable" is reported if *Patient's Home ZIP/Postal Code* is reported.

# DATE OF BIRTH

## DESCRIPTION

The patient's date of birth.

## ELEMENT VALUES

- Relevant value for data element

## ADDITIONAL INFORMATION

- Reported as YYYY-MM-DD.
- If **Date of Birth** is "Not Known/Not Recorded," report **Age** and **Age Units**.
- If **Date of Birth** is the same as the **Injury Incident Date**, then **Age** and **Age Units** must be reported.

0640	1	Single Entry Max exceeded

# AGE

## DESCRIPTION

The patient's age at the time of injury (best approximation).

## ELEMENT VALUE

- Relevant value for data element

## ADDITIONAL INFORMATION

- Must also report *Age Units*.
- Report *Age* and *Age Units* if *Date of Birth* is reported as "Not Known/Not Recorded."
- Report *Age* and *Age Units* if *Date of Birth* is reported the same as the *ED/Hospital Arrival Date*.
- The null value "Not Applicable" is reported if *Date of Birth* is reported.

0705	3	Age is greater than expected for the <i>Age Units</i> specified. Age must not exceed 60 minutes, 24 hours, 30 days, 24 months, or 120 years. Please verify this is correct.
0708	2	Element must be "Not Known/Not Recorded" when <i>Age Units</i> is "Not Known/Not Recorded"
0709	2	Element must be and can only be "Not Applicable" if <i>Date of Birth</i> is reported unless <i>Date of Birth</i> is the same as <i>ED/Hospital Arrival Date</i>
0740	1	Single Entry Max exceeded

# AGE UNITS

## DESCRIPTION

The units used to report the patient's age.

## ELEMENT VALUES

- |           |            |
|-----------|------------|
| 1. Hours  | 4. Years   |
| 2. Days   | 5. Minutes |
| 3. Months | 6. Weeks   |

# ETHNICITY

## DESCRIPTION

The patient's ethnicity.

## ELEMENT VALUES

1. Hispanic or Latino
2. Not Hispanic or Latino

## ADDITIONAL INFORMATION

- Patient ethnicity must be based upon self-report or identified by a family member.
- The maximum number of ethnicities that may be reported for an individual patient is 1.
- Based on the 2010 US Census Bureau.

# GENDER-AFFIRMING HORMONE THERAPY

## DESCRIPTION

Is the patient currently (i.e., within the past 30 days) taking hormone therapy?

## EXCLUDE:

- Patients who undergo hormone therapy for other medical reasons.

## ELEMENT VALUES

1. Yes
2. No
3. Non-disclosed

## ADDITIONAL INFORMATION

- Gender-affirming hormone therapy includes but is not limited to estrogen, antiandrogens, and testosterone.
- If unclear if medication was for gender-affirming hormone therapy, then consult TMD or relevant physician/physician extender.

# ICD-10 PRIMARY EXTERNAL CAUSE CODE

## DESCRIPTION

External cause code used to describe the mechanism (or external factor) that caused the injury event.

## ELEMENT VALUES

- Relevant ICD-10-CM or ICD-10 CA code value for injury event

## ADDITIONAL INFORMATION

- The primary external cause code must describe the main reason a patient is admitted to the hospital.
- ICD-10-CM or ICD-10-CA codes are accepted for this data element.
- Activity codes are not reported under the NTDS.
- Multiple Cause Coding Hierarchy: If two or more events cause separate injuries, an external cause code must be reported for each cause. The first-listed external cause code will be selected in the following order:
  - External cause codes for child and adult abuse take priority over all other external cause codes.
  - External cause codes for terrorism events take priority over all other external cause codes except child and adult abuse.
  - External cause codes for cataclysmic events take priority over all other external cause codes except child and adult abuse, and terrorism.
  - External cause codes for transport accidents take priority over all other external cause codes except cataclysmic events, and child and adult abuse, and terrorism.
  - The first listed external cause code must correspond to the cause of the most serious diagnosis due to an assault, accident or self-harm, following the order of hierarchy listed above.

## ICD-10 ADDITIONAL EXTERNAL CAUSE CODE

### DESCRIPTION

Additional external cause code used in conjunction with the *ICD-10 Primary External Cause Code* if multiple external cause codes are required to describe the injury event.

### ELEMENT VALUES

- Relevant ICD 10-CM or ICD-10-CA code value for injury event

### ADDITIONAL INFORMATION

- Report all that apply (maximum 2).
- Only ICD-10-CM or ICD-10-CA codes are accepted.
- Activity codes are not reported under the NTDS and must not be reported for this data element.
- The null value “Not Applicable” is reported if no additional external cause codes are reported.
- Multiple Cause Coding Hierarchy: If two or more events cause separate injuries, an external cause code must be assigned for each cause. The first-listed external cause code will be selected in the following order:

# EMS PATIENT CARE REPORT UNIVERSALLY UNIQUE IDENTIFIER (UUID)

## DESCRIPTION

The universally unique identifier (UUID) of the patient care report (PCR) of each emergency service (EMS) unit treating the patient from the time of injury to arrival at your ED/hospital.

## ELEMENT VALUES

- Relevant value for data element
- Must be represented in canonical form, matching the following regular expression:  
`[a-fA-F0-9]{8}-[a-fA-F0-9]{4}-[1-5][a-fA-F0-9]{3}-[89abAB][a-fA-F0-9]{3}-[a-fA-F0-9]{12}`

## ADDITIONAL INFORMATION

- Report all that apply (maximum 20).
- A sample UUID is: e48cd734-01cc-4da4-ae6a-915b0b1290f6.
- Automated abstraction technology provided by registry product providers/vendors must be used for this data element. In the absence of automated technology, report the null value "Not Known/Not Recorded."
- Consistent with NEMESIS v3.5.0.
- The null value "Not Known/Not Recorded" must be reported if the UUID is not documented on the EMS Run Report. The UUID will not be documented on EMS Run Reports in NEMESIS versions lower than 3.5.0. In collaboration with NEMESIS, the ACS will communicate when NEMESIS 3.5.0 is widely implemented.
- The null value "Not Applicable" must be reported if the patient was never transported via EMS prior to arrival at your hospital.
- Assigned by any applicable transporting EMS agency in accordance with the IETF RFC 4122 standard.

# INTER-FACILITY TRANSFER

## DESCRIPTION

Was the patient transferred to your facility from another acute care facility?

### INCLUDE:

- Patients who require physical transfer from a free-standing emergency department (ED) to an affiliated trauma center.

### EXCLUDE:

- Patients transferred from a private doctor's office or stand-alone ambulatory surgery center.

## ELEMENT VALUES

1. Yes
2. No

## ADDITIONAL INFORMATION

- Outlying facilities purporting to provide emergency care services or utilized to stabilize a patient are considered acute care facilities.
- Acute Care Hospital is defined as a hospital that provides inpatient medical care and other related services for surgery, acute medical conditions, or injuries (usually for a short-term illness or condition). # EMERGENCY DEPARTMENT INFORMATION

# HIGHEST ACTIVATION

## DESCRIPTION

Patient received the highest level of trauma activation at your hospital.

## INCLUDE:

- Patients who received the highest level of trauma activation initiated by emergency medical services (EMS) or by emergency department (ED) personnel at your hospital.
- Patients who received the highest level of trauma activation initiated by EMS or by ED personnel at your hospital and were downgraded after arrival to your center.
- Patients who received a lower level of trauma activation initiated by EMS or by ED personnel at your hospital and were upgraded to the highest level of trauma activation.

## EXCLUDE:

- Patients who received the highest level of trauma activation after ED discharge.

## ELEMENT VALUES

1. Yes
2. No

## ADDITIONAL INFORMATION

- Highest level of activation is defined by your hospital's criteria.

# TRAUMA SURGEON ARRIVAL DATE

## DESCRIPTION

The date the first trauma surgeon arrived at the patient's bedside.

## ELEMENT VALUES

- Relevant value for data element

## ADDITIONAL INFORMATION

- Collected as YYYY-MM-DD.
- Limit reporting to the 24 hours after ED/hospital arrival.
- The trauma surgeon leads the trauma team and is responsible for the overall care of trauma patient, including coordinating care with other specialties and maintaining continuity of care.
- The null value "Not Applicable" is reported for those patients who were not evaluated by a trauma surgeon within 24 hours of ED/hospital arrival.
- The null value "Not Applicable" is reported if *Element Value* "2. No" is reported for *Highest Activation*.

# INITIAL ED/HOSPITAL SYSTOLIC BLOOD PRESSURE

## DESCRIPTION

First recorded systolic blood pressure in the ED/hospital within 30 minutes of ED/hospital arrival.

## ELEMENT VALUES

- Relevant value for data element

## ADDITIONAL INFORMATION

- Please note the first recorded hospital vitals do not need to be from the same assessment.
- Measurement reported must be without the assistance of CPR or any type of mechanical chest compression device. For those patients who received CPR or any type of mechanical chest compressions, report the value obtained while compressions were paused.

## DESCRIPTION

Determination of respiratory assistance associated with the *Initial ED/Hospital Respiratory Rate* within 30 minutes of ED/hospital arrival.

## ELEMENT VALUES

1. Unassisted Respiratory Rate
2. Assisted Respiratory Rate

## ADDITIONAL INFORMATION

- Only reported if *Initial ED/Hospital Respiratory Rate* is reported.
- Respiratory assistance is defined as mechanical and/or external support of respiration.
- The null value “Not Applicable” is reported if *Initial ED/Hospital Respiratory Rate* is “Not Known/Not Recorded.”
- Please note the first recorded hospital vitals do not need to be from the same assessment.

Determination of the presence of supplemental oxygen during assessment of *Initial ED/Hospital Oxygen Saturation* level within 30 minutes or less of ED/hospital arrival.

## ELEMENT VALUES

1. No Supplemental Oxygen
2. Supplemental Oxygen

## ADDITIONAL INFORMATION

- The null value “Not Applicable” is reported if *Initial ED/Hospital Oxygen Saturation* is “Not Known/Not Recorded.”

# INITIAL ED/HOSPITAL GCS-EYES

## DESCRIPTION

First recorded Glasgow Coma Scale (GCS) Eyes in the ED/hospital within 30 minutes of ED/hospital arrival.

## ELEMENT VALUES

1. No eye movement when assessed
2. Opens eyes in response to painful stimulation
3. Opens eyes in response to verbal stimulation
4. Opens eyes spontaneously

## ADDITIONAL INFORMATION

- If a patient does not have a numeric GCS documented, but written documentation closely (or directly) relates to verbiage describing a specific level of functioning within the GCS, the appropriate numeric score may be reported (e.g., the chart indicates: “patient’s pupils are PERRL,” a GCS Eyes of 4 may be reported, IF there is no other contradicting documentation).
- The null value “Not Known/Not Recorded” is reported if **Initial ED/Hospital GCS-40 Eyes** is documented.
- The null value “Not Known/Not Recorded” is reported if the patient’s **Initial ED/Hospital GCS – Eyes** was not measured within 30 minutes of ED/hospital arrival.
- Please note that the first recorded hospital vitals do not need to be from the same assessment.

# INITIAL ED/HOSPITAL GCS-VERBAL

## DESCRIPTION

First recorded Glasgow Coma Scale (GCS) Verbal within 30 minutes of ED/hospital arrival.

## ELEMENT VALUES

### Pediatric ( $\leq 2$ years):

- |                                       |  |
|---------------------------------------|--|
| 1. No vocal response                  | 4. Cries but is consolable, inappropriate interactions   |
| 2. Inconsolable, agitated             |  |
| 3. Inconsistently consolable, moaning | 5. Smiles, oriented to sounds, follow objects, interacts |

### Adult:

- |                            |             |
|----------------------------|-------------|
| 1. No verbal response      | 4. Confused |
| 2. Incomprehensible sounds | 5. Oriented |
| 3. Inappropriate words     |             |

## ADDITIONAL INFORMATION

- If the patient is intubated, the GCS Verbal is equal to 1.
- If a patient does not have a numeric GCS recorded, but written documentation closely (or directly) relates to verbiage describing a specific level of functioning within the GCS, the appropriate numeric score may be reported (e.g., the chart indicates: “patient is oriented to person, place, and time,” a GCS Verbal of 5 may be reported, IF there is no other contradicting documentation).
- The null value “Not Known/Not Recorded” is reported if **Initial ED/Hospital GCS-40 Verbal** is reported.
- The null value “Not Known/Not Recorded” is reported if the patient’s **Initial ED/Hospital GCS – Verbal** was not measured within 30 minutes of ED/hospital arrival.

# INITIAL ED/HOSPITAL GCS-MOTOR

## DESCRIPTION

First recorded Glasgow Coma Scale (GCS) Motor within 30 minutes of ED/hospital arrival.

## ELEMENT VALUES

### Pediatric (≤ 2 years):

1. No motor response
2. Extension to pain
3. Flexion to pain
4. Withdrawal from pain
5. Localizing pain
6. Appropriate response to stimulation

### Adult:

1. No motor response
2. Extension to pain
3. Flexion to pain
4. Withdrawal from pain
5. Localizing pain
6. Obeys commands

## ADDITIONAL INFORMATION

- If a patient does not have a numeric GCS recorded, but written documentation closely (or directly) relates to verbiage describing a specific level of functioning within the GCS, the appropriate numeric score may be reported (e.g., the chart indicates: “patient withdraws from a painful stimulus,” a GCS Motor of 4 may be reported, IF there is no other contradicting documentation).
- The null value “Not Known/Not Recorded” is reported if **Initial ED/Hospital GCS-40 Motor** is reported.

# INITIAL ED/HOSPITAL GCS-TOTAL

## DESCRIPTION

First recorded Glasgow Coma Scale (GCS) Total Score within 30 minutes of ED/hospital arrival.

## ELEMENT VALUES

- Relevant value for data element

## ADDITIONAL INFORMATION

- If a patient does not have a numeric GCS score recorded, but there is documentation related to their level of consciousness such as “AAOx3,” “awake alert and oriented,” or “patient with normal mental status,” report this as GCS score of 15 IF there is no other contradicting documentation.
- The null value “Not Known/Not Recorded” is reported if Initial ED/hospital GCS-40 is reported.
- The null value “Not Known/Not Recorded” is reported if *Initial ED/Hospital GCS – Eyes*, *Initial ED/Hospital GCS – Motor*, *Initial ED/Hospital GCS – Verbal* were not measured within 30 minutes of ED/hospital arrival.
- Please note that the first record ED/Hospital vitals do not need to be from the same assessment.

# INITIAL ED/HOSPITAL GCS-ASSESSMENT QUALIFIERS

## DESCRIPTION

Documentation of factors potentially affecting the first assessment of GCS within 30 minutes of ED/hospital arrival.

## ELEMENT VALUES

1. Patient Chemically Sedated or Paralyzed
2. Obstruction to the Patient's Eye
3. Patient Intubated
4. Valid GCS: Patient was not sedated, not intubated, and did not have obstruction to the eye

## ADDITIONAL INFORMATION

- Report all that apply.
- Identifies treatments given to the patient that may affect the first GCS assessment. This element does not apply to self-medications the patient may administer (i.e., ETOH, prescriptions, etc.).
- *Element Value* "1. Patient Chemically Sedated or Paralyzed" is reported if an intubated patient has recently received an agent that results in neuromuscular blockade such that a motor or eye response is not possible.
- Neuromuscular blockade is typically induced following the administration of agent like succinylcholine, mivacurium, rocuronium, (cis)atracurium, vecuronium, or pancuronium. While these are the most common agents, please review what might be typically used in your center so it can be identified in the medical record.
- Each of these agents has a slightly different duration of action, so their effect on the GCS depends on when they were given (e.g., succinylcholine's effects last for only 5-10 minutes).
- Please note that the first recorded hospital vitals do not need to be from the same assessment.
- The null value "Not Known/Not Recorded" is reported if *Initial ED/Hospital GCS-40 Eyes*, *Initial ED/Hospital GCS-40 Verbal*, *Initial ED/Hospital GCS-40 Motor* are reported.
- The null value "Not Known/Not Recorded" is reported if the *Initial ED/Hospital GCS – Assessment Qualifiers* are not documented within 30 minutes of ED/hospital arrival.

## ADDITIONAL INFORMATION

- If a patient does not have a numeric GCS-40 recorded, but written documentation closely (or directly) relates to verbiage describing a specific level of functioning within the GCS-40, the appropriate numeric score may be reported (e.g., the chart indicates: “patient opened mouth and stuck out tongue when asked” for adult patient’s, a GCS-40 Motor of 6 may be reported, IF there is no other contradicting documentation).
- Report *Element Value* “0. Not Testable” if unable to assess (e.g., neuromuscular blockade).
- The null value “Not Known/Not Recorded” is reported if **Initial ED/Hospital GCS – Motor** is reported.
- The null value “Not Known/Not Recorded” is reported if the patient’s **Initial ED/Hospital GCS-40 Motor** was not measured within 30 minutes or less of ED/hospital arrival.

# HOSPITAL PROCEDURE INFORMATION

# ICD-10 HOSPITAL PROCEDURES

## DESCRIPTION

Operative and selected non-operative procedures conducted during hospital stay. Operative and selected non-operative procedures are those that were essential to the diagnosis, stabilization, or treatment of the patient's specific injuries or complications. The list of procedures below should be used as a guide to non-operative procedures that should be provided to TQP.

## ELEMENT VALUES

- Major and minor procedure ICD-10 PCS or ICD-10-CA procedure codes
- The maximum number of procedures that may be reported for a patient is 200

## ADDITIONAL INFORMATION

- Only report procedures performed at your institution.
- Report all procedures performed in the operating room.
- Report all procedures in the ED, ICU, ward, or radiology department that were essential to the diagnosis, stabilization, or treatment of the patient's specific injuries or their complications.
- Procedures with an asterisk have the potential to be performed multiple times during one episode of hospitalization. In this case, report only the first event. If there is no asterisk, report each event even if there is more than one.
- Note that the hospital may report additional procedures.
- Report the null value "Not Applicable" if the patient did not have procedures.

# BRONCHOPULMONARY DYSPLASIA/CHRONIC LUNG DISEASE

## DESCRIPTION

The disorders which constitute Chronic Lung Disease (CLD) generally have a slow tempo of progression over many months or even years. The most common causes of CLD in children are Cystic Fibrosis (CF), and other causes of bronchiectasis (such as immunodeficiency, and in the third world, post-infective bronchiectasis (e.g., measles), Bronchopulmonary Dysplasia (BPD), or lung disease of prematurity).

### INCLUDE:

- Patients with a diagnosis of Cystic Fibrosis with pulmonary involvement.

### EXCLUDE:

- Patients with a diagnosis of Cystic Fibrosis with no documentation of lung disease.

## ELEMENT VALUES

1. Yes
2. No

## ADDITIONAL INFORMATION

- Present prior to injury.
- Based on the patient's age on the day of arrival at your hospital.
- Only report on patients < 15 years-of-age.
- The null value "Not Applicable" must be reported for patients ≥ 15 years-of-age.
- The null value "Not Known/Not Recorded" is only reported if no past medical history is available for patients < 15 years-of-age.
- Examples of evidence of Cystic Fibrosis-associated pulmonary disease include, but are not limited to:
  - Use of Chest Physiotherapy (CPT) or other airway clearing techniques.
  - Vest therapy or intrapulmonary percussive ventilator.
  - Intravenous, inhaled, or oral antibiotics to treat chronic respiratory infections related to Cystic Fibrosis.

# CHRONIC OBSTRUCTIVE PULMONARY DISEASE (COPD)

## DESCRIPTION

Chronic obstructive pulmonary disease (COPD) is a lung disease characterized by chronic obstruction of lung airflow that interferes with normal breathing and is not fully reversible. The more familiar terms 'chronic bronchitis' and 'emphysema' are no longer used but are now included within the COPD diagnosis.

## EXCLUDE:

- Patients whose only pulmonary disease is asthma.
- Patients with diffuse interstitial fibrosis or sarcoidosis.

## ELEMENT VALUES

1. Yes
2. No

## ADDITIONAL INFORMATION

- Present prior to injury.
- A diagnosis of COPD must be documented in the patient's medical record.

# CIRRHOSIS

## DESCRIPTION

Cirrhosis is the replacement of normal liver tissue with non-living scar tissue related to other liver diseases. Must have documentation in the medical record of cirrhosis, which might also be referred to as end-stage liver disease.

## EXCLUDE:

- Patients who no longer have cirrhosis due to a successful liver transplant.

## ELEMENT VALUES

1. Yes
2. No

## ADDITIONAL INFORMATION

- Present prior to injury.
- A diagnosis of cirrhosis, or documentation of cirrhosis by diagnostic imaging studies or a laparotomy/laparoscopy, must be in the patient's medical record.
- Documentation in the medical record may include CHILD or MELD scores that support evidence of cirrhosis.

# CONGESTIVE HEART FAILURE (CHF)

## DESCRIPTION

The inability of the heart to pump a sufficient quantity of blood to meet the metabolic needs of the body or can do so only at an increased ventricular filling pressure.

## ELEMENT VALUES

1. Yes
2. No

## ADDITIONAL INFORMATION

- Present prior to injury.
- A diagnosis of CHF must be documented in the patient's medical record.
- To be included, this condition must be noted in the medical record as CHF, congestive heart failure, or pulmonary edema with onset of increasing symptoms within 30 days prior to injury.
- Common manifestations are:
  - Abnormal limitation in exercise tolerance due to dyspnea or fatigue
  - Orthopnea (dyspnea or lying supine)
  - Paroxysmal nocturnal dyspnea (awakening from sleep with dyspnea)
  - Increased jugular venous pressure
  - Pulmonary rales on physical examination
  - Cardiomegaly
  - Pulmonary vascular engorgement

A diagnosis of any of the following documented in the medical record:

- Antisocial personality disorder
- Avoidant personality disorder
- Borderline personality disorder
- Dependent personality disorder
- Generalized anxiety disorder
- Histrionic personality disorder
- Narcissistic personality disorder
- Obsessive-compulsive disorder
- Obsessive-compulsive personality disorder
- Panic disorder
- Paranoid personality disorder
- Schizotypal personality disorder

## ELEMENT VALUES

## PERIPHERAL ARTERIAL DISEASE (PAD)

### DESCRIPTION

The narrowing or blockage of the vessels that carry blood from the heart to the legs. It is primarily caused by the buildup of fatty plaque in the arteries, which is called atherosclerosis. Peripheral Arterial Disease (PAD) can occur in any blood vessel, but it is more common in the legs than the arms.

### ELEMENT VALUES

1. Yes
2. No

### ADDITIONAL INFORMATION

- Present prior to injury.
- A diagnosis of Peripheral Arterial Disease must be documented in the patient's medical record.
- Based on the patient's age on the day of arrival at your hospital.
- Only report on patients  $\geq 15$  years-of-age.
- The null value "Not Applicable" must be reported for patients  $< 15$  years-of-age.
- The null value "Not Known/Not Recorded" is only reported if no past medical history is available for patients  $\geq 15$  years-of-age.

# ACUTE KIDNEY INJURY (AKI)

## DESCRIPTION

Acute Kidney Injury, AKI (stage 3), is an abrupt decrease in kidney function.

### *KDIGO* Staging of AKI Table:

STAGE	SERUM CREATININE	URINE OUTPUT
3	3.0 times baseline OR Increase in serum creatinine to ≥ 4.0mg/dl (≥353.6μmol/l) OR Initiation of renal replacement therapy OR, in patients < 18 years, decrease in eGFR to < 35ml/min per 1.73 m <sup>2</sup>	< 0.3 ml/kg/h for ≥ 24 hours OR Anuria for ≥ 12 hours

### EXCLUDE:

- Patients with renal failure that were requiring chronic renal replacement therapy such as periodic peritoneal dialysis, hemodialysis, hemofiltration, or hemodiafiltration prior to injury.

## ELEMENT VALUES

1. Yes
2. No

## ADDITIONAL INFORMATION

- Onset of AKI Stage 3 began after arrival to your ED/hospital.
- A diagnosis of acute kidney injury (AKI) must be documented in the patient's medical record.

# CARDIAC ARREST WITH CPR

## DESCRIPTION

Cardiac arrest is the sudden cessation of cardiac activity after hospital arrival. The patient becomes unresponsive with no normal breathing and no signs of circulation. If corrective measures are not taken rapidly, this condition progresses to sudden death.

## INCLUDE:

- Patients who, after arrival at your hospital, have had an episode of cardiac arrest evaluated by hospital personnel, and received compressions or defibrillation or cardioversion or cardiac pacing to restore circulation.

## EXCLUDE:

- Patients whose ONLY episode of cardiac arrest with CPR was on arrival to your hospital.

# CATHETER-ASSOCIATED URINARY TRACT INFECTION (CAUTI)

## DESCRIPTION

A urinary tract infection (UTI) where an indwelling urinary catheter was in place for > 2 calendar days on the date of event, with day of device placement being Day 1,

## AND

An indwelling urinary catheter was in place on the date of event or the day before. If an indwelling urinary catheter was in place for more than 2 consecutive days in an inpatient location and then removed, the date of event for the UTI must be the day of device discontinuation or the next day for the UTI to be catheter-associated.

### **January 2019 CDC CAUTI Criterion SUTI 1a:**

Patient must meet 1, 2, **and** 3 below:

1. Patient had an indwelling urinary catheter that had been in place for more than 2 consecutive days in an inpatient location on the date of event AND was either:
  - Present for any portion of the calendar day on the date of event,

**OR**

  - Removed the day before the date of event.
2. Patient has at least one of the following signs or symptoms:
  - Fever (> 38°C): Reminder: To use fever in a patient > 65 years of age, the IUC needs to be in place for more than 2 consecutive days in an inpatient location on date of event and is either still in place or was removed the day before the DOE.
  - Suprapubic tenderness
  - Costovertebral angle pain or tenderness
  - Urinary urgency
  - Urinary frequency
  - Dysuria
3. Patient has a urine culture with no more than two species of organisms identified, at least one of which is a bacterium > 10<sup>5</sup> CFU/ml.

### **January 2019 CDC CAUTI Criterion SUTI 2:**

Patient must meet 1, 2 **and** 3 below:

1. Patient is ≤ 1 year of age
2. Patient has at least one of the following signs or symptoms:
  - fever (> 38.0°C)
  - hypothermia (< 36.0°C)
  - apnea
  - bradycardia
  - lethargy
  - vomiting
  - suprapubic tenderness
3. Patient has a urine culture with no more than two species of organisms, at least one of which is a bacterium of ≥ 10<sup>5</sup> CFU/ml.

# CENTRAL LINE-ASSOCIATED BLOODSTREAM INFECTION (CLABSI)

## DESCRIPTION

A laboratory-confirmed bloodstream infection (LCBI) where central line (CL) or umbilical catheter (UC) was in place for > 2 calendar days on the date of event, with day of device placement being Day 1,

### AND

The line was also in place on the date of event or the day before. If a CL or UC was in place for > 2 calendar days and then removed, the date of event of the LCBI must be the day of discontinuation or the next day to be a CLABSI. If the patient is admitted or transferred into a facility with an implanted central line (port) in place, and that is the patient's only central line, day of first access in an inpatient location is considered Day 1. "Access" is defined as line placement, infusion or withdrawal through the line. Such lines continue to be eligible for CLABSI once they are accessed until they are either discontinued or the day after patient discharge (as per the Transfer Rule). Note that the "de-access" of a port does not result in the patient's removal from CLABSI surveillance.

### January 2016 CDC Criterion LCBI 1:

Patient has a recognized pathogen identified from one or more blood specimens by a culture or non-culture based microbiologic testing method which is performed for purposes of clinical diagnosis or treatment (e.g., not Active Surveillance Culture/Testing (ASC/AST).

### AND

Organism(s) identified in blood is not related to an infection at another site.

### OR

### January 2016 CDC Criterion LCBI 2:

Patient has at least one of the following signs or symptoms: fever (>38°C), chills, or hypotension.

### AND

Organism(s) identified from blood is not related to an infection at another site.

### AND

The same common commensal (i.e., diphtheroids [*Corynebacterium* spp. not *C. diphtheriae*], *Bacillus* spp. [not *B. anthracis*], *Propionibacterium* spp., coagulase-negative staphylococci [including *S. epidermidis*], viridans group streptococci, *Aerococcus* spp., and *Micrococcus* spp.) is identified from two or more blood specimens drawn on separate occasions, by a culture or non-culture based microbiologic testing method which is performed for purposes of clinical diagnosis or treatment (e.g., not Active Surveillance Culture/Testing (ASC/AST). Criterion elements must occur within the Infection Window Period, the 7-day time period which includes the collection date of the positive blood, the 3 calendar days before and the 3 calendar days after.

### OR

## January 2016 CDC Criterion LCBI 3:

Patient  $\leq$  1 year of age has at least one of the following signs or symptoms: fever ( $>38^{\circ}$  C), hypothermia ( $<36^{\circ}$ C), apnea, or bradycardia.

### AND

Organism(s) identified from blood is not related to an infection at another site.

### AND

The same common commensal (i.e., diphtheroids [Corynebacterium spp. not C. diphtheriae], Bacillus spp. [not B. anthracis], Propionibacterium spp., coagulase-negative staphylococci [including S. epidermidis], viridans group streptococci, Aerococcus spp., Micrococcus spp.) is identified from two or more blood specimens drawn on separate occasions, by a culture or non-culture base microbiologic testing method which is performed for purposes of clinical diagnosis or treatment (e.g., not Active Surveillance Culture/Testing (ASC/AST). Criterion elements must occur within the Infection Window Period, the 7-day time period which includes the collection date of the positive blood, the 3 calendar days before and the 3 calendar days after.

# DEEP SURGICAL SITE INFECTION

## DESCRIPTION

Must meet the following criteria:

Infection occurs within 30 or 90 days after the NHSN operative procedure (where day 1 = the procedure date) according to list in Table 2

### AND

Involves deep soft tissues of the incision (e.g., fascial and muscle layers)

### AND

Patient has at least *one* of the following:

- a. Purulent drainage from the deep incision.
- b. A deep incision that spontaneously dehisces, or is deliberately opened or aspirated by a surgeon, attending physician\*\* or other designee and organism is identified by a culture or non-culture based microbiologic testing method which is performed for purposes of clinical diagnosis or treatment (e.g., not Active Surveillance Culture/Testing (ASC/AST) or culture or non-culture based microbiologic testing method is not performed.

### AND

Organism(s) identified from the deep soft tissues of the incision by culture or non-culture based microbiologic testing method which is performed for purposes of clinical diagnosis or treatment (for example, not Active Surveillance Culture/Testing (ASC/AST) or culture or non-culture based microbiologic testing method is not performed. A culture or non-culture based test from the deep soft tissues of the incision that has a negative finding does not meet this criterion.

### AND

Patient has at least one of the following signs or symptoms: fever (> 38°C); localized pain or tenderness. A culture or non-culture based test that has a negative finding does not meet this criterion.

- c. An abscess or other evidence of infection involving the deep incision that is detected on gross anatomical or histopathologic exam, or imaging test

\* The term attending physician for the purposes of application of the NHSN SSI criteria may be interpreted to mean the surgeon(s), infectious disease, other physician on the case, emergency physician, or physician's designee (nurse practitioner or physician's assistant).

COMMENTS: There are two specific types of deep incisional SSIs:

1. Deep Incisional Primary (DIP) – a deep incisional SSI that is identified in a primary incision in a patient that has had an operation with one or more incisions (e.g., C-section incision or chest incision for CBGB).
2. Deep Incisional Secondary (DIS) – a deep incisional SSI that is identified in the secondary incision in a patient that has had an operation with more than one incision (e.g., donor site incision for CBGB).

## ORGAN/SPACE SURGICAL SITE INFECTION

### DESCRIPTION

Must meet the following criteria:

Infection occurs within 30 or 90 days after the NHSN operative procedure (where day 1 = the procedure date) according to the list in Table 2

### AND

Infection involves any part of the body deeper than the fascial/muscle layers, that is opened or manipulated during the operative procedure

### AND

Patient has at least *one* of the following:

- a. Purulent drainage from a drain that is placed into the organ/space (e.g., closed suction drainage system, open drain, T-tube drain, CT guided drainage).
- b. Organisms are identified from fluid or tissue in the organ/space by a culture or non-culture based microbiologic testing method which is performed for purposes of clinical diagnosis or treatment (e.g., not Active Surveillance Culture/Testing (ASC/AST)).
- c. An abscess or other evidence of infection involving the organ/space that is detected on gross anatomical or histopathologic exam, or imaging test evidence suggestive of infection.

### AND

Meets at least one criterion for a specific organ/space infection site listed in Table 3. These criteria are found in the Surveillance Definitions for Specific Types of Infections chapter.

## DESCRIPTION

Osteomyelitis must meet at least one of the following criteria:

1. Patient has organism(s) identified from bone by culture or non-culture based microbiologic testing method, which is performed for purposes of clinical diagnosis and treatment, for example, not Active Surveillance Culture/Testing (ASC/AST).
2. Patient has evidence of osteomyelitis on gross anatomic or histopathologic exam.
3. Patient has at least two of the following localized signs or symptoms:
  - Fever (> 38.0°C)
  - Swelling\*
  - Pain or tenderness\*
  - Heat\*
  - Drainage\*

**AND at least one of the following:**

- a. Organisms identified from blood by culture or non-culture based microbiologic testing method, which is performed for purposes of clinical diagnosis and treatment, for example, not Active Surveillance Culture/Testing (ASC/AST) AND Imaging test evidence suggestive of infection (for example, x-ray, CT scan, MRI, radiolabel scan [gallium, technetium, etc.]), which if equivocal is supported by clinical correlation, specifically, physician documentation of antimicrobial treatment for osteomyelitis.
- b. Imaging test evidence suggestive of infection (for example, x-ray, CT scan, MRI, radiolabel scan [gallium, technetium, etc.]), which if equivocal is supported by clinical correlation, specifically, physician documentation of antimicrobial treatment for osteomyelitis).

# SEVERE SEPSIS

## DESCRIPTION

Severe sepsis: sepsis plus organ dysfunction, hypotension (low blood pressure), or hypoperfusion (insufficient blood flow) to 1 or more organs.

Septic shock: sepsis with persisting arterial hypotension or hypoperfusion despite adequate fluid resuscitation.

## ELEMENT VALUES

1. Yes
2. No

## ADDITIONAL INFORMATION

- Onset of symptoms began after arrival to your ED/hospital.
- A diagnosis of sepsis must be documented in the patient's medical record.
- Consistent with the American College of Chest Physicians and the Society of Critical Care Medicine October 2010.

## DESCRIPTION

A focal or global neurological deficit of rapid onset and NOT present on admission caused by a clot obstructing the flow of blood flow to the brain (ischemic stroke). Or by a blood vessel rupturing and preventing blood flow to the brain (hemorrhagic stroke). Or a transient ischemic attack which is temporary caused by a temporary clot. The patient must have at least one of the following symptoms:

- Change in level of consciousness
- Hemiplegia
- Hemiparesis
- Numbness or sensory loss affecting on side of the body
- Dysphasia or aphasia
- Hemianopia
- Amaurosis fugax
- Other neurological signs or symptoms consistent with stroke

### AND

- Duration of neurological deficit  $\geq$  24 h

### OR

- Duration of deficit < 24 h, if neuroimaging (MR, CT, or cerebral angiography) documents a new hemorrhage or infarct consistent with stroke, or therapeutic intervention(s) were performed for stroke, or the neurological deficit results in death

### AND

- No other readily identifiable non-stroke cause, e.g., progression of existing traumatic brain injury, seizure, tumor, metabolic or pharmacologic etiologies, is identified

### AND

- Diagnosis is confirmed by neurology or neurosurgical specialist or neuroimaging procedure (MR, CT, angiography) or lumbar puncture (CSF demonstrating intracranial hemorrhage that was not present on admission)

## ELEMENT VALUES

1. Yes
2. No

## ADDITIONAL INFORMATION

- Onset of symptoms began after arrival to your ED/hospital.
- A diagnosis of stroke/CVA must be documented in the patient's medical record.
- Although the neurologic deficit must not present on admission, risk factors predisposing to stroke (e.g., blunt cerebrovascular injury, dysrhythmia) may be present on admission.

# SUPERFICIAL INCISIONAL SURGICAL SITE INFECTION

## DESCRIPTION

Must meet the following criteria:

Infection occurs within 30 days after any NHSN operative procedure (where day 1 = the procedure date)

### AND

Involves only skin and subcutaneous tissue of the incision

### AND

Patient has at least one of the following:

- a. Purulent drainage from the superficial incision.
- b. Organisms identified from an aseptically-obtained specimen from the superficial incision or sub cutaneous tissue by a culture or non-culture based microbiologic testing method which is performed for purposes of clinical diagnosis or treatment (e.g., not Active Surveillance Culture/Testing (ASC/AST)).
- c. Superficial incision that is deliberately opened by a surgeon, attending physician\*\* or other designee and culture or non-culture based testing is not performed.

### AND

Patient has at least one of the following signs or symptoms: pain or tenderness; localized swelling; erythema; or heat. A culture or non-culture based test that has a negative finding does not meet this criterion.

- d. Diagnosis of a superficial incisional SSI by the surgeon or attending physician\*\* or other designee.

\*The term attending physician for the purposes of application of the NHSN SSI criteria may be interpreted to mean the surgeon(s), infectious disease, other physician on the case, emergency physician, or physician's designee (nurse practitioner or physician's assistant).

COMMENTS: There are two specific types of superficial incisional SSIs:

1. Superficial Incisional Primary (SIP) – a superficial incisional SSI that is identified in the primary incision in a patient that has had an operation with one or more incisions (e.g., C- section incision or chest incision for CBGB).
2. Superficial Incisional Secondary (SIS) – a superficial incisional SSI that is identified in the secondary incision in a patient that has had an operation with more than one incision (e.g., donor site incision for CBGB).

## ELEMENT VALUES

1. Yes
2. No

## ADDITIONAL INFORMATION

- Onset of symptoms began after arrival to your ED/hospital.
- A diagnosis of a surgical site infection must be documented in the patient's medical record.
- Consistent with the January 2019 CDC defined SSI.

# UNPLANNED INTUBATION

## DESCRIPTION

Patient requires placement of an endotracheal tube and mechanical or assisted ventilation manifested by severe respiratory distress, hypoxia, hypercarbia, or respiratory acidosis.

## ELEMENT VALUES

1. Yes
2. No

## ADDITIONAL INFORMATION

- Must have occurred during the patient's initial stay at your hospital.
- For patients who were intubated in the field or emergency department, or those intubated for surgery, an unplanned intubation occurs if they require reintubation > 24 hours after they were extubated.

## OUTCOME INFORMATION

## TOTAL ICU LENGTH OF STAY

### DESCRIPTION

The cumulative amount of time spent in the ICU. Each partial or full day must be measured as one calendar day.

### ELEMENT VALUES

- Relevant values for data element

### ADDITIONAL INFORMATION

- Reported in full day increments with any partial calendar day counted as a full calendar day.
- The calculation assumes that the date and time of starting and stopping an ICU episode are recorded in the patient's chart.
- At no time can the **Total ICU Length of Stay** exceed the hospital LOS.
- The null value "Not Known/Not Recorded" is reported if any dates are missing.
- If patient has multiple ICU episodes on the same calendar day, count that day as one calendar day.
- The null value "Not Applicable" is reported if the patient had no ICU days according to the above description.

Example #1	Start Date	Start Time	Stop Date	Stop Time	LOS

## TOTAL VENTILATOR DAYS

### DESCRIPTION

The cumulative amount of time spent on the ventilator. Each partial or full day must be measured as one calendar day.

### ELEMENT VALUES

- Relevant values for data element

### ADDITIONAL INFORMATION

- Excludes mechanical ventilation time associated with OR procedures.
- Non-invasive means of ventilatory support (CPAP or BiPAP) must not be considered in the calculation of ventilator days.
- Reported in full day increments with any partial calendar day counted as a full calendar day.
- The calculation assumes that the date and time of starting and stopping ventilator episode are recorded in the patient's chart.
- At no time can the **Total Ventilator Days** exceed the hospital LOS.
- The null value "Not Known/Not Recorded" is reported if any dates are missing.
- The null value "Not Applicable" is reported if the patient was not on the ventilator according to the above description.

# HOSPITAL DISCHARGE DISPOSITION

## DESCRIPTION

The disposition of the patient when discharged from the hospital.

## ELEMENT VALUES

1. Discharged/Transferred to a short-term general hospital for inpatient care
2. Discharged/Transferred to an Intermediate Care Facility (ICF)
3. Discharged/Transferred to home under care of organized home health service
4. Left against medical advice or discontinued care
5. Deceased/Expired
6. Discharged to home or self-care (routine discharge)
7. Discharged/Transferred to Skilled Nursing Facility (SNF)
8. Discharged/Transferred to hospice care
10. Discharged/Transferred to court/law enforcement
11. Discharged/Transferred to inpatient rehab or designated unit
12. Discharged/Transferred to Long Term Care Hospital (LTCH)
13. Discharged/Transferred to a psychiatric hospital or psychiatric distinct part unit of a hospital
14. Discharged/Transferred to another type of institution not defined elsewhere

## ADDITIONAL INFORMATION

- *Element Values* adapted from UB-04 disposition coding.
- *Element Value "6. Home"* refers to the patient's current place of residence (e.g., Prison, Child Protective Services etc.).
- Disposition to any other non-medical facility must be reported as *Element Value "6. Discharged to home or self-care (routine discharge)."*
- Disposition to any other medical facility must be reported as *Element Value "14. Discharged/Transferred to another type of institution not defined elsewhere."*
- Disposition to any Federal Health Care facility must be reported by selecting the option that most closely aligns to the needs of the patient (e.g., patients discharged to a Veteran's hospital skilled nursing facility must be reported as *Element Value "7. Discharged/Transferred to Skilled Nursing Facility."*)
- The null value "Not Applicable" is reported if **ED Discharge Disposition** is reported as *Element Value 4, 5, 6, 9, 10, 11, or 13.*
- Hospital Discharge Dispositions which were retired greater than 2 years before the current NTDS version are no longer listed under *Element Values* above, which is why there are numbering gaps. Refer to the NTDS Change Log for a full list of retired **Hospital Discharge Dispositions**.

## HIGHEST GCS TOTAL

**REPORTING CRITERION:** Report on patients with at least one injury in AIS head region, excluding patients with isolated scalp abrasion(s), scalp contusion(s), scalp laceration(s), and/or scalp avulsion(s).

### DESCRIPTION

Highest total GCS score on calendar day after ED/hospital arrival.

### ELEMENT VALUES

- Relevant value for data element

### ADDITIONAL INFORMATION

- Refers to highest total GCS score on calendar day after ED/hospital arrival to index hospital, where index hospital is the hospital abstracting the data.
- For patients who were discharged from your hospital prior to the next calendar day after ED/hospital arrival, the null value "Not Applicable" is reported.
- For patients who were at your hospital on the calendar day after ED/hospital arrival, the null value "Not Known/Not Recorded" is reported if reporting *Highest GCS-40 Motor*.
- The null value "Not Applicable" is reported for patients who do not meet the reporting criterion.
- Requires review of all data sources to obtain the highest GCS total on the calendar day after ED/hospital arrival.
- If patient is intubated, then the GCS Verbal is equal to 1.
- Best obtained when sedatives or paralytics are withheld as part of sedation holiday.
- If a patient does not have a numeric GCS recorded, but there is documentation related to their level of consciousness such as "AAOx3," "awake alert and oriented," or "patient with normal mental status," report this as GCS of 15 IF there is no other contradicting documentation.

## GCS ASSESSMENT QUALIFIER COMPONENT OF HIGHEST GCS TOTAL

**REPORTING CRITERION:** Report on patients with at least one injury in AIS head region, excluding patients with isolated scalp abrasion(s), scalp contusion(s), scalp laceration(s), and/or scalp avulsion(s).

### DESCRIPTION

Documentation of factors potentially affecting the highest GCS on calendar day after ED/hospital arrival.

### ELEMENT VALUES

1. Patient chemically sedated or paralyzed
2. Obstruction to the patient's eye
3. Patient intubated
4. Valid GCS: patient was not sedated, not intubated, and did not have obstruction to the eye

### ADDITIONAL INFORMATION

- Report all that apply.
- Refers to highest GCS assessment qualifier score on calendar day after ED/hospital arrival to index hospital, where index hospital is the hospital abstracting the data.
- For patients who were discharged from your hospital prior to the next calendar day after ED/hospital arrival, the null value "Not Applicable" is reported.
- For patients who were at your hospital on the calendar day after ED/hospital arrival, the null value "Not Known/Not Recorded" is reported if reporting **Highest GCS-40 Motor**.
- The null value "Not Applicable" is reported for patients who do not meet the reporting criterion.
- Requires review of all data sources to obtain the highest GCS motor score on calendar day after ED/hospital arrival, which might occur after the ED phase of care.
- Identifies medical treatments given to the patient that may affect the best assessment of GCS. This element does not apply to self-medication the patient may have administered (i.e., ETOH, prescriptions, etc.).
- Must be the assessment qualifier for the **Highest GCS Total** on calendar day after ED/hospital arrival.
- If an intubated patient has recently received an agent that results in neuromuscular blockade such that a motor or eye response is not possible, then the patient must be considered to have an exam that is not reflective of their neurologic status and the chemical sedation modifier must be reported.
- Neuromuscular blockade is typically induced following the administration of agents like succinylcholine, mivacurium, rocuronium, (cis)atracurium, vecuronium, or pancuronium. While these are the most common agents, please review what might be typically used in your center so it can be identified in the medical record.
- Each of these agents has a slightly different duration of action, so their effect on the GCS depends on when they were given. For example, succinylcholine's effects last for only 5-10 minutes.

# Highest GCS 40-Motor

## 2025 TQP Process Measure Algorithm

**1** Exclude patients with isolated scalp abrasion(s), scalp contusion(s), scalp laceration(s) and/or scalp avulsion(s).

**2** If a patient does not have a numeric GCS-40 score recorded, but written documentation closely (or directly) relates to verbiage describing a specific level of functioning within the GCS scale, the appropriate numeric score may be reported (e.g., the chart indicates: "patient opened mouth and stuck out tongue when asked" for adult patients; a Motor GCS-40 of 6 may be reported, if there is no other contradicting documentation).

## INITIAL ED/HOSPITAL PUPILLARY RESPONSE

**REPORTING CRITERION:** Report on patients with at least one injury in AIS head region, excluding patients with isolated scalp abrasion(s), scalp contusion(s), scalp laceration(s), and/or scalp avulsion(s).

### DESCRIPTION

Physiological response of the pupil size within 30 minutes or less of ED/hospital arrival.

### ELEMENT VALUES

1. Both reactive
2. One reactive
3. Neither reactive

### ADDITIONAL INFORMATION

- Please note that first recorded hospital vitals do not need to be from the same assessment.
- If a patient does not have a listed element value recorded, but there is documentation related to their pupillary response such as Pupils Equal Round Reactive to Light (PERRL), report *Element Value* "1. Both reactive" IF there is no other contradicting documentation.
- The null value "Not Known/Not Recorded" must be reported if this information is not documented or if assessment is unable to be obtained due to facial trauma and/or foreign object in the eye.
- *Element Value* "2. One reactive" must be reported for patients who have a prosthetic eye.
- The null value "Not Applicable" is reported for patients that do not meet the reporting criterion.

## MIDLINE SHIFT

**REPORTING CRITERION:** Report on patients with at least one injury in AIS head region, excluding patients with isolated scalp abrasion(s), scalp contusion(s), scalp laceration(s), and/or scalp avulsion(s).

### DESCRIPTION

>5mm shift of the brain past its center line within 24-hours after time of injury.

### ELEMENT VALUES

1. Yes
2. No
3. Not Imaged (e.g., CT Scan, MRI)

### ADDITIONAL INFORMATION

- If there is documentation of "massive" midline shift in lieu of >5mm shift measurement, report *Element Value* "1. Yes."
- Radiological and surgical documentation from transferring facilities must be considered for this data element.
- The null value "Not Applicable" is reported for patients that do not meet the reporting criterion.
- The null value "Not Known/Not Recorded" is reported if both the injury date and injury time are unknown.
- If the injury time is unknown, but there is supporting documentation that the injury occurred within 24-hours of any CT measuring a >5mm shift, report the *Element Value* "1. Yes" if there is no other contradicting documentation.
- If the patient was not imaged within 24 hours from the time of injury, report the *Element Value* "3. Not Imaged (e.g., CT Scan, MRI)."

# CEREBRAL MONITOR

**REPORTING CRITERION:** Report on patients with at least one injury in AIS head region, excluding patients with isolated scalp abrasion(s), scalp contusion(s), scalp laceration(s), and/or scalp avulsion(s).

## DESCRIPTION

Indicate all cerebral monitors that were placed, including any of the following: ventriculostomy, subarachnoid bolt, camino bolt, external ventricular drain (EVD), licox monitor, jugular venous bulb.

## ELEMENT VALUES

1. Intraventricular drain/catheter (e.g., ventriculostomy; external ventricular drain)
2. Intraparenchymal pressure monitor (e.g., Camino bolt, subarachnoid bolt, intraparenchymal catheter)
3. Intraparenchymal oxygen monitor (e.g., Licox)
4. Jugular venous bulb
5. None

## ADDITIONAL INFORMATION

- Report all that apply.
- Refers to insertion of an intracranial pressure (ICP) monitor (or other measures of cerebral perfusion) for the purposes of managing severe TBI.
- Cerebral monitor placed at a referring facility would be acceptable if such a monitor was used by receiving facility to monitor the patient.
- The null value "Not Applicable" is reported for patients that do not meet the reporting criterion.

## ANGIOGRAPHY DATE

**REPORTING CRITERION:** Report on all patients with transfused packed red blood cells or whole blood within first 4 hours after ED/hospital arrival.

### DESCRIPTION

Date the first angiogram with or without embolization was performed.

### ELEMENT VALUES

- Relevant value for data element

### ADDITIONAL INFORMATION

- Reported as YYYY-MM-DD.
- Procedure start date is the date of needle insertion in the groin.
- The null value "Not Applicable" is reported if the data element *Angiography* is *Element Value* "1. None."
- The null value "Not Applicable" is reported for patients that do not meet the reporting criterion.

# WITHDRAWAL OF LIFE SUPPORTING TREATMENT

**REPORTING CRITERION:** Report on all patients.

## DESCRIPTION

Treatment was withdrawn based on a decision to either remove or withhold further life supporting intervention. This decision must be documented in the medical record and is often, but not always associated with a discussion with the legal next of kin.

## ELEMENT VALUES

1. Yes
2. No

## ADDITIONAL INFORMATION

- Do-not-resuscitate (DNR) order not a requirement.
- DNR order is not the same as withdrawal of life supporting treatment.
- A note to limit escalation of treatment qualifies as a withdrawal of life supporting treatment. These interventions are limited to: ventilator support (with or without extubation), dialysis or other forms of renal support, institution of medications to support blood pressure or cardiac function, or a specific surgical, interventional or radiological procedure (e.g., decompressive craniectomy, operation for hemorrhage control, angiography). Note that this definition provides equal weight to the withdrawal of an intervention already in place (e.g., extubation) and a decision not to proceed with a life-supporting intervention (e.g., intubation).
- Excludes the discontinuation of CPR and typically involves prior planning.
- *Element Value "2. No"* must be reported for patients whose time of death, according to your hospital's definition, was prior to the removal of any interventions or escalation of care.

## APPENDIX 2: EDIT CHECKS FOR THE NATIONAL TRAUMA DATA STANDARDS DATA ELEMENTS

The flags described in this Appendix are those that are produced by the Validator when an NTDS XML file is checked. Each rule ID is assigned a flag level 1 – 3. Level 1 and 2 flags must be resolved, or the entire file cannot be submitted to the TQP. Level 3 flags serve as recommendations to check data elements associated with the flags. However, level 3 flags do not necessarily indicate that data are incorrect.

The Flag Levels are defined as follows:

- **Level 1: Format / schema\*** – any element that does not conform to the “rules” of the XSD. That is, these are errors that arise from XML data that cannot be parsed or would otherwise not be legal XML. Some errors in this Level do not have a Rule ID – for example: illegal tag, commingling of null values and actual data, out of range errors, etc.
- **Level 2: Inclusion criteria and/or critical to analyses\*** – this level affects the elements needed to determine if the record meets the inclusion criteria for the NTDS or are required for critical analyses.
- **Level 3: Logic** – data consistency checks related to variables commonly used for reporting (e.g., Arrival Date, E-code, etc.) and blank elements that are acceptable to create a “valid” XML record but may cause certain parts of the record to be excluded from analysis.

Please note:

- Any XML file submitted to TQP that contains one or more Level 1 or 2 Flags will result in the entire file being rejected. These kinds of flags must be resolved before a submission will be accepted.
- *Facility ID, Patient ID and Last Modified Date/Time* are not described in the data dictionary and are only required in the XML file as control information for back-end TQP processing. However, these elements are mandatory to provide in every XML record. Consult your Registry Vendor if one of these flags occurs.

The remainder of this Appendix provides a consolidated list of Rule IDs by Data Element. There is an additional Rule ID, “0000”, with Flag Level 1 that will be returned when a Data Element is contained in the XML file that is not valid based on this Data Dictionary.

## APPENDIX 4: TECHNICAL ADDENDUM FOR EMS DATA TRANSFER

To accommodate third party entities that use the NTDS Technical Standard as a template, the NTDS Technical Standard will allow retired pre-hospital data elements to be transmitted using the retired tags in a data submission file. These data are optional, they are not used by ACS or required for any TQP deliverables, they are not validated at the *TQP Data Center*, nor are they required to pass the TQP validator.

Each of the optional NTDS data elements are listed below and follow the same technical specifications as when they were retired from the NTDS after admission year 2020.

- EMS DISPATCH DATE
- EMS DISPATCH TIME
- EMS UNIT ARRIVAL DATE AT SCENE OR TRANSFERRING FACILITY
- EMS UNIT ARRIVAL TIME AT SCENE OR TRANSFERRING FACILITY
- EMS UNIT DEPARTURE DATE FROM SCENE OR TRANSFERRING FACILITY
- EMS UNIT DEPARTURE TIME FROM SCENE OR TRANSFERRING FACILITY
- INITIAL FIELD SYSTOLIC BLOOD PRESSURE
- INITIAL FIELD PULSE RATE
- INITIAL FIELD RESPIRATORY RATE
- INITIAL FIELD OXYGEN SATURATION
- INITIAL FIELD GCS – EYE
- INITIAL FIELD GCS – VERBAL
- INITIAL FIELD GCS – MOTOR
- INITIAL FIELD GCS – TOTAL
- INITIAL FIELD GCS 40 – EYE
- INITIAL FIELD GCS 40 – VERBAL
- INITIAL FIELD GCS 40 – MOTOR
- TRAUMA TRIAGE CRITERIA (Steps 1 and 2)
- TRAUMA TRIAGE CRITERIA (Steps 3 and 4)

For questions regarding if these data are included in your data submission file, please contact your trauma registry vendor for assistance.

## APPENDIX 5: ACRONYMS

- AIS: Abbreviated Injury Scale
- AKI: Acute Kidney Injury
- ARDS: Acute Respiratory Distress Syndrome
- CAUTI: Catheter-Associated Urinary Tract Infection
- CDC: Centers for Disease Control
- CHILD: Child-Pugh score for Cirrhosis mortality
- CLABSI: Central Line-Associated Bloodstream Infection
- CPR: cardiopulmonary resuscitation
- CT: computerized tomography
- DVT: Deep Vein Thrombosis
- ED: emergency department
- EMS: emergency medical service
- GCS: Glasgow Coma Scale
- ICD-10: International Classification of Diseases, Tenth Revision
- ICD-10-CA: International Classification of Diseases, Tenth Revision, Canada
- ICD-10-CM: International Classification of Diseases, Tenth Revision, Clinical Modification
- ICD-10-PCS: International Classification of Diseases, Tenth Revision, Procedure Coding System
- ICU: intensive care unit
- LOS: length of stay
- MELD: Model for end-stage liver disease
- MI: Myocardial Infarction
- NA: not applicable
- NEMESIS: National Emergency Medical Services Information System
- NK/NR: not known/not recorded
- NTDS: National Trauma Data Standard
- OR: operating room
- PACU: post-anesthesia care unit
- PE: Pulmonary Embolism
- TQIP: Trauma Quality Improvement Program
- TQP: Trauma Quality Programs
- UUID: Universally unique identifier
- VAP: Ventilator-Associated Pneumonia

## APPENDIX 6: ELEMENT INTENTS

### PRE-EXISTING CONDITIONS

#### ADVANCE DIRECTIVE LIMITING CARE

Implementation of a previously signed advanced directive impacts care and influences outcomes.

#### ALCOHOL USE DISORDER

Consumption of high levels of alcohol can affect the immune system, negatively affect wound healing, and increase the risk of developing infection, which could impact care decisions, increase the risk of adverse outcomes and prolong the length of stay.

#### ANTICOAGULANT THERAPY

Anticoagulants could induce greater risk of bleeding and increase the risk of adverse outcomes.

#### ATTENTION DEFICIT DISORDER/ATTENTION DEFICIT HYPERACTIVITY DISORDER (ADD/ADHD)

Patients with ADD/ADHD experience impulsiveness, restlessness, and difficulty focusing on tasks which could impact care decisions, increase the risk of adverse outcomes and prolong the length of stay.

#### AUTISM SPECTRUM DISORDER (ASD)

Patients with ASD experience problems with social communications and interaction, restricted or repetitive behaviors or interest, and/or different ways of learning, moving or paying attention, which could impact care decisions and increase the risk of adverse outcomes.

#### BIPOLAR I/II DISORDER

Patients with Bipolar Disorder experience severe mood disturbances that cause clinically significant distress or impairment in social, occupational, or other important areas of functioning, which could impact care decisions and increase the risk of adverse outcomes.

#### BLEEDING DISORDER

Underlying hematologic disorders result in a greater risk of bleeding which could increase the risk of adverse outcomes.

#### BRONCHOPULMONARY DYSPLASIA/CHRONIC LUNG DISEASE

Bronchopulmonary Dysplasia/Chronic Lung Disease could induce negative respiratory and pulmonary function, which could impact care decisions and increase the risk of adverse outcomes.

## **CEREBRAL VASCULAR ACCIDENT (CVA)**

Persistent residual motor sensory or cognitive deficits could impact care decisions and increase the risk of adverse outcomes.

## **CHRONIC OBSTRUCTIVE PULMONARY DISEASE (COPD)**

COPD limits respiratory reserve and prolongs the duration of mechanical ventilation, which could increase the risk of adverse outcomes.

## **CHRONIC RENAL FAILURE**

Chronic renal failure reflects limited renal reserve, which increases the risk of adverse outcomes.

## **CIRRHOSIS**

Cirrhosis/end stage liver disease reflects limited hepatic reserve, which could impact care decisions and increase the risk of adverse outcomes.

## **CONGENITAL ANOMALIES**

Congenital anomalies have a multitude of risks, which could impact care decisions and increase the risk of adverse outcomes.

## **CONGESTIVE HEART FAILURE (CHF)**

CHF reflects limited cardiac reserve, leading to a higher risk of adverse outcomes.

## **CURRENT SMOKER**

Inhaling nicotine could induce negative cardiopulmonary effects, increase risk for stroke, negatively affect wound healing, increase anesthesia risk and the development of a venous thromboembolism (VTE), which could impact care decisions and increase the risk of adverse outcomes.

## **CURRENTLY RECEIVING CHEMOTHERAPY FOR CANCER**

The effects of chemotherapy increase the risk of infection, and could limit physiologic reserve, which together increases the risk of adverse outcomes.

## **DEMENTIA**

Patients with dementia experience forgetfulness, limited social skills and impaired thinking that could impact care decisions and prolong the length of stay.

## **DIABETES MELLITUS**

Diabetes can increase risk for infection, negatively affect wound healing, and contribute to renal and cardiac dysfunction, which could impact care decisions and increase the risk of adverse outcomes.

## **DISSEMINATED CANCER**

Advanced malignancy reflecting serious physiologic compromise has a multitude of risks, which could impact care decisions and increase the risk of adverse outcomes.

## **FUNCTIONALLY DEPENDENT HEALTH STATUS**

Pre-injury functional status could indicate a chronic/underlying disease state, which could impact care decisions and increase the risk of adverse outcomes.

## **HYPERTENSION**

Hypertension that requires medication increases risk for cerebrovascular, renal, and cardiac disease, which could impact care decisions and increase the risk of adverse outcomes.

## **MAJOR DEPRESSIVE DISORDER**

Patients with Major Depressive Disorder experience depressed mood, loss of interest/pleasure, weight issues, fatigue, insomnia or hypersomnia, psychomotor agitation or retardation, decreased concentration, delusional guilt, and suicidal ideation which cause clinically significant distress or impairment in social, occupational, or other important areas of functioning, which could impact care decisions and increase the risk of adverse outcomes.

## **MYOCARDIAL INFARCTION (MI)**

Myocardial infarction causes damage or death to the heart muscle, which could impact care decisions and increase the risk of adverse outcomes.

## **OTHER MENTAL/PERSONALITY DISORDER**

Patients with these disorders experience significant distress or impairment in social, occupational, or other important areas of functioning, which could impact care decisions and increase the risk of adverse outcomes.

## **PERIPHERAL ARTERIAL DISEASE**

PAD reflects cardiovascular risk, which itself is associated with adverse outcomes.

## **POST-TRAUMATIC STRESS DISORDER**

Patients with PTSD experience intrusive symptoms, avoidance, altered mood, altered reactivity, causing clinically significant distress or impairment in social, occupational, or other important areas of functioning, which could impact care decisions and increase the risk of adverse outcomes.

## **PREGNANCY**

Trauma during pregnancy could cause pre-term labor and/or placental abruption, which could impact care decisions and increase the risk of adverse outcomes.

## **PREMATURITY**

Prematurity can induce a multitude of risks, which could impact care decisions and increase the risk of adverse outcomes.

## **SCHIZOAFFECTIVE DISORDER**

Patients with Schizoaffective Disorder experience hallucinations, delusions, mania, depression and disorganized thinking causing clinically significant distress or impairment in social, occupational, or other important areas of functioning, which could impact care decisions and increase the risk of adverse outcomes.

## **SCHIZOPHRENIA**

Patients with Schizophrenia experience hallucinations, delusions, disorganized speech, grossly disorganized or catatonic behavior, diminished emotional expression or avolition causing clinically significant distress or impairment in social, occupation, or other important areas of functioning, which could impact care decisions and increase the risk of adverse outcomes.

## **STEROID USE**

Steroids negatively affect wound healing and increase the risk of infection, which could impact care decisions and increase the risk of adverse outcomes.

## **SUBSTANCE USE DISORDER**

Patients with substance use disorder are at increased risk of heart, lung, liver, and kidney diseases, as well as stroke, cancer, and mental health conditions, which could impact care decisions and increase the risk of adverse outcomes.

## **VENTILATOR DEPENDENCE**

The need for ventilator-assisted respirations reflects limited pulmonary reserve, which increases the risk of adverse outcomes.

## HOSPITAL EVENTS

### ACUTE KIDNEY INJURY (AKI)

A potentially preventable event often induced by sepsis, hypotension, drug toxicity and/or renal trauma; advancement to stage 3 requires treatment which could increase the hospital length of stay and the likelihood of mortality.

### ACUTE RESPIRATORY DISTRESS SYNDROME (ARDS)

A potentially preventable event often induced by pneumonia, viral infection, sepsis, blood transfusion, pancreatitis, fat emboli, trauma, or other injuries, requiring treatment which could increase the hospital length of stay and the likelihood of mortality.

### ALCOHOL WITHDRAWAL SYNDROME

A potentially preventable event often associated with infectious complications, requiring treatment which could increase the hospital length of stay and the likelihood of mortality.

### CARDIAC ARREST WITH CPR

A potentially preventable event often associated with either a medical or trauma-related condition, requiring treatment which could increase the hospital length of stay and the likelihood of mortality.

### CATHETER-ASSOCIATED URINARY TRACT INFECTION (CAUTI)

A potentially preventable event often induced by bacteria entering the urinary tract through the catheter, requiring treatment which could increase the hospital length of stay and the likelihood of mortality.

### CENTRAL LINE-ASSOCIATED BLOODSTREAM INFECTION (CLABSI)

A potentially preventable event, often induced by bacteria entering the bloodstream through the central line, requiring treatment which could increase the hospital length of stay and the likelihood of mortality.

### DEEP SURGICAL SITE INFECTION

A potentially preventable event often induced by bacteria, viruses, or endogenous flora contacting a surgical wound, requiring treatment which could increase the hospital length of stay and the likelihood of mortality.

### DEEP VEIN THROMBOSIS (DVT)

A potentially preventable event often induced by immobility, anesthesia, stroke, venous catheters, dehydration, and/or thrombocytosis, requiring treatment which could increase the hospital length of stay and the likelihood of mortality.

## **DELIRIUM**

A potentially preventable event often induced by infection, stroke, lung or liver disease, medications, low sodium, low blood sugar, urinary retention, dehydration, low oxygen, or an unfamiliar environment, requiring treatment which could increase the hospital length of stay and the likelihood of mortality.

## **MYOCARDIAL INFARCTION (MI)**

A potentially preventable event often induced by coronary artery disease, medications, emotional stress, or pain, requiring treatment which could increase the hospital length of stay and the likelihood of mortality.

## **ORGAN/SPACE SURGICAL SITE INFECTION**

A potentially preventable event often induced by bacteria or endogenous flora contacting a surgical wound, requiring treatment which could increase the hospital length of stay and the likelihood of mortality.

## **OSTEOMYELITIS**

A potentially preventable event often induced by bacteria or fungi, diabetes, and/or a weakened immune system, requiring treatment which could increase the hospital length of stay and the likelihood of mortality.

## **PULMONARY EMBOLISM (PE)**

A potentially preventable event requiring treatment which could increase the hospital length of stay and the likelihood of mortality.

## **PRESSURE ULCER**

A potentially preventable event often induced by pressure or friction, moisture or other medical factors; advancement to stage II or greater requires treatment which could increase the hospital length of stay and the likelihood of mortality.

## **SEVERE SEPSIS**

A potentially preventable event often induced by bacterial, viral or fungal infections, requiring treatment which could increase the hospital length of stay and the likelihood of mortality.

## **STROKE/CVA**

A potentially preventable event often induced by obstruction of blood flow or a ruptured blood vessel in the brain, requiring treatment which could increase the hospital length of stay and the likelihood of mortality.

### **SUPERFICIAL INCISIONAL SURGICAL SITE INFECTION**

A potentially preventable event often induced by endogenous flora or exogenous contamination contacting a surgical site, requiring treatment which could increase the hospital length of stay.

### **UNPLANNED ADMISSION TO THE ICU**

A potentially preventable event that highlights possible gaps in the assessment of the severity of the patient's condition or the application of appropriate treatment plans.

### **UNPLANNED INTUBATION**

A potentially preventable event that highlights possible gaps in the assessment of the severity of the patient's condition or the application of appropriate treatment plans.

### **UNPLANNED VISIT TO THE OPERATING ROOM**

A potentially preventable event that highlights possible opportunities for improvements in care.

### **VENTILATOR-ASSOCIATED PNEUMONIA (VAP)**

A potentially preventable event often induced by bacteria or virus entering the lungs, requiring treatment which could increase the hospital length of stay and the likelihood of mortality.

## TQIP MEASURES FOR PROCESSES OF CARE

### HIGHEST GCS TOTAL

The Total GCS score is used to gauge the severity of neurologic impairment. Collecting the highest provides identification of the patient's best state after presentation to hospital.

### HIGHEST GCS MOTOR

The GCS Motor score is one component of the Total GCS and provides information on the severity of neurologic impairment. Collecting the highest provides identification of the patient's best state after presentation to hospital.

### GCS ASSESSMENT QUALIFIER COMPONENT OF HIGHEST GCS TOTAL

GCS qualifiers indicate a GCS that might be altered due to medical intervention.

### HIGHEST GCS-40 MOTOR

The GCS-40 Motor score provides information on the severity of neurologic impairment. Collecting the highest provides identification of the patient's best state after presentation to hospital.

### INITIAL ED/HOSPITAL PUPILLARY RESPONSE

Pupillary response is an indicator of brain stem function, optic nerve injury, and/or oculomotor nerve damage, and is an indicator for patients with brain injuries.

### MIDLINE SHIFT

Midline shift >5mm suggests evidence of increased intracranial pressure and may be an indication for surgical evacuation for the treatment of severe brain injury.

### CEREBRAL MONITOR

Cerebral monitoring is a critical component in the management of brain injuries.

### VENOUS THROMBOEMBOLISM PROPHYLAXIS TYPE

VTE prophylaxis is used to prevent the development of deep venous thrombosis.

### PACKED RED BLOOD CELLS

Transfusion volume and ratio might reflect severity of injury or practices which could highlight opportunities for improvement.

## **WHOLE BLOOD**

Transfusion volume and ratio might reflect severity of injury or practices which could highlight opportunities for improvement.

## **PLASMA**

Transfusion volume and ratio might reflect severity of injury or practices which could highlight opportunities for improvement.

## **PLATELETS**

Transfusion volume and ratio might reflect severity of injury or practices which could highlight opportunities for improvement.

## **CRYOPRECIPITATE**

Transfusion volume and ratio might reflect severity of injury or practices which could highlight opportunities for improvement.

## **ANGIOGRAPHY**

Angiograms are important interventions for hemorrhage control.

## **EMBOLIZATION SITE**

In conjunction with Angiography, determines the organ/site of hemorrhage.

## **SURGERY FOR HEMORRHAGE CONTROL TYPE**

Surgery types could highlight practice variation which correlate with outcomes for high complexity trauma patients.

## **WITHDRAWAL OF LIFE SUPPORTING TREATMENT**

Withdrawal of Life Supporting Treatment could highlight opportunities to improve palliative care resource utilization.

## **ANTIBIOTIC THERAPY**

IV antibiotics reduce risk of infection.
